Page: 1 of 6

HEBEI SHENG TIAN PIPE-FITTING GROUP CO.,LTD
XIWANG NEW DISTRICT,MENGCUN COUNTY,HEBEI PROVINCE,P.R.CHINA

The following sample(s) was/were submitted and identified on behalf of the client as:

Sample Name : Smls Steel Pipe
Sample No. : SM17232
Product Specification : $\Phi 219.1 \times 12.7 \text{mm}$
Heat No. : 234930
Supplier : HEBEI SHENG TIAN PIPE-FITTING GROUP CO.,LTD
Material and Mark : ASTM A333 Gr.6
Test Required : SSC Resistance Performance Evaluation-Four point Loading
Date of Receipt : July 20, 2013
Test Period : July 20, 2013 to Sept. 15, 2013

Test result(s) : For further details, please refer to the following page(s)

SSC Resistance Performance Evaluation-Four point loading:
Test method:NACE MR 0175-2005,ISO7539-2:1989,ASTM A333

1. Specification dimensions

The Test specifications shall be taken 120 degrees apart around the circumference,Three test specimens are taken from pipe along rolling direction,see Figure 1. And the Figure 2 shows the dimension of test specimens. T represents the thickness of specimen and t represents wall thickness of the tube. A maximum of 1mm may be removed form internal and external surfaces.

TEST REPORT

No.: DB1307852
Date: Sept. 15, 2013
Page: 4 of 6

Figure 4 Schematic diagram of four-point loaded specimen

According to ISO 7539-2:1989 standard, calculate load displacement by the following equation:

$$\sigma = \frac{12Et y_m}{3H^2 - 4A^2}$$

Where,

- σ = maximum tensional stress, i.e. load stress, Pa;
- E = modulus of elasticity;
- T = specimen thickness
- y = maximum deflection between outer supporting points, i.e. load displacement, m;
- H = distance between outer supports;
- A = distance between inner and outer supporting points.

3. Test procedure

See the test procedures in Section 8.6 of NACE Standard MR 0175-2005

4. Test result

208.8Mpa (290Mpa×72%) stress was loaded on the three submitted specimens in NACE Standard MR 0175 A solution. After 720 hours test duration, none of the three specimens were broken and no SSC cracks were found upon 10× magnifier examination on the tensile surface, either (See Table 2 and Figure 5)

TEST REPORT

No.: DB1307852
Date: Sept. 15, 2013
Page: 5 of 6

Table 2 SSC Test result

Specimen No.	Minimum Thickness (mm)	Displacement (mm)	Result
D1	5.15	0.55	Unbroken, No cracks
D1	5.16	0.54	Unbroken, No cracks
D3	5.15	0.55	Unbroken, No cracks

Figure 5 Macro morphology of specimens after testing

5. Conclusion:

Commissioned samples were put in standard Solution A (0.5wt% CH_3COOH +5wt% NaCl). The stress loaded on the samples was 208.8Mpa (290Mpa \times 72%). After 720 hours test duration, none of the three specimens were broken and no SSC cracks were found upon 10 \times magnifier examination on the tensile surface, either.

The submitted specimens meet the SSC evaluation requirements, according to Acceptance Criteria.

Note: The test was carried out by external laboratory assessed as competent.
